SUMMARY

Software Engineer and Technical Team Leader with more than +3 years of experience in designing and developing scalable backend systems, BI platforms, and real-time services using NestJS and Python. Skilled in software architecture, secure software development, performance optimization, and distributed systems. Experienced in working with PostgreSQL, MSSQL, MySQL, Redis, and Elasticsearch, with strong knowledge of database optimization and system reliability. Proven ability to lead cross-functional teams, collaborate with product and DevOps teams, and deliver high-quality software aligned with sprint and business goals. Strong background in TDD, integration testing, performance testing, and OWASP-based secure development practices.

SKILLS

- Languages:** Node.js, Python, Java, SQL
- Technologies:** NestJs, Express, FastApi, Flask, Redis, Docker, Linux, ELK(Elasticsearch, Logstash, Kibana), Kafka, WebSocket, RabbitMQ, BullMq, Jmeter
- Databases:** PostgreSQL, MySQL, SQLServer
- Infrastructure:** Linux, Docker, gitlab-CI
- Methodologies:** Agile, Scrum, OOP, SOLID Principles, Design Patterns

EXPERIENCE

NadinSoft	Tehran, Iran
<i>Software Engineer (Backend Developer)</i>	<i>Dec 2022 – 2024, Full-time</i>
- Designed and developed backend microservices for Business Intelligence (BI) platforms using NestJS and Python, focusing on scalability, maintainability, and high availability. - Implemented secure software development practices based on OWASP principles and AFTA requirements, improving system security and reducing potential attack surfaces. - Optimized application and database performance through query tuning, caching strategies, asynchronous processing, and backend profiling techniques. - Worked extensively with MSSQL, MySQL, PostgreSQL, Redis, and Elasticsearch in development and operational environments, gaining strong expertise in database design, query optimization, indexing strategies, and performance analysis. - Developed unit, integration, and end-to-end tests using TDD practices to ensure release stability, maintainability, and regression prevention across services. - Performed load, stress, and performance testing using Jmeter to evaluate system reliability under high-traffic workloads and identify performance bottlenecks.	
NadinSoft	Tehran, Iran
<i>Technical Team Leader</i>	<i>Sep 2024 – Present, Full-time</i>
- Led backend and frontend development teams to ensure timely delivery of sprint goals while maintaining alignment with product and business requirements. - Collaborated closely with Product Owners and Scrum Masters to plan sprint tasks, prioritize features, manage technical risks, and improve delivery efficiency. - Coordinated communication and technical alignment between backend, frontend, and DevOps teams to ensure stable integration, deployment readiness, and production reliability. - Worked directly with the product team and stakeholders to analyze customer requirements and translate business needs into scalable technical solutions. - Continued contributing as a backend developer by designing and implementing scalable services using NestJS and Python within the BI platform ecosystem. - Oversaw release quality through code reviews, testing strategies, and adherence to secure software development and performance optimization practices.	

EDUCATION

Islamic Azad University

B.Sc. in Computer Engineering

Tehran, Iran

2018 – 2023

Shahid Beheshti University

M.A. in Computer Engineering - Software Engineering

Tehran, Iran

2023 – 2025
